

Report week 3

Project name: Artfolio.

Name and surname: Greta Aquilina.

Week: : 21/03 up to 27/03.

Functionalities implemented during the week

During the third week, as specified in the timetable, the following has been done:

- Creation of the php files for the creator's profile section(partially), company's profile section(partially). For the creator's profile it was implemented: visualization of the portfolio and its creations, modify or delete creations in the portfolio, visualization of the list of the job advertisements to which the creator has applied and retire an application from the previous list.
- Each php file includes: the code of the HTML page and the code of the functionalities required by each page.
- Fixed some issues and bugs related to: the database creation (i.e missing field required for some functionalities in Tag table), post a creation, post a job advertisement, visualization of the job advertisements on company's profile during the search operation, visualization of the portfolio and its creations on creator's profile during the search operation.

Approximately, the creation of each php file required 4/5 hours of work, the bug fixing required 1/2 hours for each php file, depending on the extent of the problem in the code.

Functionalities to be implemented in the next week

During the next week it will be implemented:

- Remaining advanced functionalities that are missing, such as the suggestion of the users' portfolios when a company creates a job advertisement, possibly, terminating the implementation of all the system functionality.
- Framework and styling of the website
