FINAL PRESENTATION

FEATURES OF THE PROJECT

IMPLEMENTED FEATURES PT.1

- Creation of an account or sign-up.
- Login into the system.
- Post a creation, as a creator.
- Post a job advertisement, as a company, and visualize suggested creators who have a better affinity for that job. So, the possibility, as a company: to visualize the creator's profile; to create an appliance for that creator and automatically accept the proposal and send him a message with meeting or contact information.
- Search for users.
- Visualize user's profile (by clicking on the user's name in the result of the search or on its name in the post displayed in the homepage)
- Homepage with: the possibility to browse the creations and job advertisements (i.e there are two sections in the homepage: creations and job advertisement); the possibility to filter the creations by order (ascending, descending) or by tag; same for the job advertisements.
- Visualize a post, user can click on the name of the user, who created that post, to be redirected to his profile and visualize that post in its profile.
- Apply to a job advertisement

FEATURES OF THE PROJECT

IMPLEMENTED FEATURES PT.2

- Visualize applications to a job advertisement in company's profile
- Visualize list of applied job advertisement in content creator's profile
- Visualize the content creators' portfolios that are suggested after the creation of a job advertisement or that are displayed in the list associated with a job advertisement.
- Sending meeting and contact informations to a candidate after accepting his/her proposal
- Modify or delete a job advertisement
- Modify or delete a creation
- Notifications in case: the creator's proposal has been accepted and so he/she has received a message; the creator's proposal has been rejected; the creator's profile, shown in the proposals list of the company, has been visited.
- On the creator's side, a section where the creator can visualize all the messages that he/she received from companies.
- Log out

FEATURES OF THE PROJECT

UNIMPLEMENTED FEATURES

- Hosting online of the project
- Implementation of prevention of the sql injections.

ADDED FEATURES AND CHANGED FEATURES

- On the creator's side, a section, where the creator can visualize all the messages that he/she has received from companies
- In the specification, the job advertisements could be filtered according to: latest and popularity. In the actual implementation, the job advertisement can be filtered by order: ascending, descending (default order); by tag (i.e by job figure)

NET TIME

ACTUAL NET TIME

- Approximately 142 hours

ESTIMATED NET TIME

- Estimated hours were approximately 140 hours

ISSUES

ISSUES DURING THE IMPLEMENTATION

- Implementation of features that required AJAX

FEATURES THAT NEED A REWORK

- Sql queries. Correct structure of the sql queries to prevent injections.
- Framework. A more popular framework could have been used, like React.js.
