Report week 7

Project name: Artfolio.
Name and surname: Greta Aquilina.
Week: : 18/04 up to 25/04.

Functionalities implemented during the week

During the seventh week, the following has been done:
- Missing framework/styling features implementation: (commit: https://github.com/AquilinaGreta/Creating_Internet_Application_Project/commit/18960cfaa59e0bd50beb6d11b7c0a1b44b77b4ee)
    1. Homepage: fading effect on post when user (both creators and companies), shifting visualization between creations and job advertisements, selects a filter to order the post.
    2. Homepage: some bugs related to filters.
    3. Notification: when the creator clicks on the notification icon, the number of notifications is set to zero and the next time the creator clicks on the icon the notification will appear in font-weight normal, not bold.
- Creation of a pre-existing list of tags after the creation of the database and its tables. (commit: https://github.com/AquilinaGreta/Creating_Internet_Application_Project/commit/65ff32b6ccaec3b60b988d747ad485eba09ad69a)
- On the creator's side, when performing the sign-up, the list of job figures is retrieved from the Tag table in the database, so it's not static anymore. (commit: https://github.com/AquilinaGreta/Creating_Internet_Application_Project/commit/62b76cda52d027c2d45b2c60d5aae3f778abc7c1)

Each php file includes: the code of the HTML page and the code of the functionalities required by each page.
Approximately, the creation of each php file required 4/5 hours of work while fixing the pre-existing functionalities required 1/2 hours of work.

Functionalities to be implemented in the next week

During the next week, an in-depth test of the entire website, and its functionalities, will be performed to refine, eventually, some website parts.
