Report week 8

Project name: Artfolio.
Name and surname: Greta Aquilina.
Week: : 25/04 up to 2/04.

Functionalities implemented during the week

During the 8th week, an in-depth test of the entire website, and its functionalities, was performed. Some corrections have been done:

- Fixing of visual imperfections in the visualization of a company's profile for which the posts, published by a company, were not displayed as aligned right.
- In the visualization of the user's profile (both company and creators), the links related to the user's Facebook, Twitter etc. accounts were removed.
- Implementation of a pre-existing creator and his posts in the website, by creating his profile and posts when creating the database.
- Fixing of visual imperfection when, as a company, we contact a suggested creator. The visual imperfection "Link to Image" was replaced by "Meeting Link".
- Fixing of visual imperfection when, as a creator, we access the message section. If there are no messages, then a message saying that there are no messages will be displayed.
- Fixed a warning that appeared when accessing the message section as a creator.

Functionalities to be implemented in the next week

During the next week, an additional in-depth test will be performed.
