Report week 6

Project name: Artfolio.
Name and surname: Greta Aquilina.
Week: : 11/04 up to 18/04.

Functionalities implemented during the week

During the sixth week, the following has been done:
- On the creator's side, a section, where the creator can visualize all the messages that he/she has received from companies. (Commit: https://github.com/AquilinaGreta/Creating_Internet_Application_Project/commit/91d33fa3ce92f9afd7491a8d6a848c01e9331abf)

Functionalities to be implemented in the next week

During the next week it will be implemented:
- Missing framework/styling features:
    1. Homepage: fading effect on post when user (both creators and companies), shifting visualization between creations and job advertisements, selects a filter to order the post.
    2. Homepage: some bugs related to filters.
    3. Notification: when the creator clicks on the notification icon, the number of notifications should be set to zero and the next time the creator clicks on the icon the notification will appear in font-weight normal, not bold.
