Project name: Artfolio.
Name and surname: Greta Aquilina.
Week: : 28/03 up to 4/04.

Functionalities implemented during the week

During the fourth week, the following has been done:
- Implementation of company's profile with all its functionalities(commit: https://github.com/AquilinaGreta/Creating_Internet_Application_Project/commit/1729f429a2e0c8bc4f9a1e37b45c8d859dd7a39a):
  1. Visualize proposals of published job advertisements.
  2. Visualize the creator's portfolio who applied for a job.
  3. Reject creator's proposal.
  4. Accept the creator's proposal and send to the creator a message with meeting information.
  5. Visualize published job advertisements.
  6. Modify a job advertisement.
  7. Delete a job advertisement.
  8. Suggest creator's profile after the creation of a job advertisement by company
- Implementation of notifications on creator's profile (partially). (commit: https://github.com/AquilinaGreta/Creating_Internet_Application_Project/commit/c6150fda9380f25511676a31426356132ce7c61c)
- Fixed some issues and bugs related to:
  1. the database creation (i.e missing field required for some functionalities in Application table). (commit: https://github.com/AquilinaGreta/Creating_Internet_Application_Project/commit/3494f07b0546fea36d02b432d2318a0c9e48febe)
  2. Functionalities related to the database changes. (commit: https://github.com/AquilinaGreta/Creating_Internet_Application_Project/commit/c6f9c834bfbd896863c6d4b7d47f853f4ce7c653)

Each php file includes: the code of the HTML page and the code of the functionalities required by each page.
Approximately, the creation of each php file required 4/5 hours of work, the bug fixing required 2 hours for each php file, depending on the extent of the problem in the code.

Functionalities to be implemented in the next week

During the next week it will be implemented:
- Remaining advanced functionalities that are missing: homepage; complete and fix some bugs related to the notification section on creator's profile.
- Framework and styling of the website.
